

Samtax Industrial and Agriculture Water Pumps TS Series

Brief

TS series water pumps are single stage centrifugal pumps used in industrial and agriculture applications. All pump casing and motor frames as well as the impeller are made from cast iron material. Welded stainless steel shaft is used for pump shaft for resisting corrosion material. Silicon carbide and stainless steel materials are used for mechanical seal for corrosion resistant. The pump inlet and outlet are fitted with galvanized steel flanges for easily maintained. The pump is driven by a heavy duty three phase induction motor having double voltages 230/380V and with frequency of 60 Hz. This make the pump is cost effective at the same time more efficient. These type of pumps are manufactured with wide ranges of head/discharge capacities to satisfy the customer applications.
